

ARYA SURYAVANSHI

Software Engineer | AI / ML Enthusiast | Full-Stack Developer

Navi Mumbai, Maharashtra ♦ +91 9321535039 ♦ aryasurya1309@gmail.com ♦ github.com/Aryasurya12 ♦ [LinkedIn](#)

PROFESSIONAL SUMMARY

High-achieving Electronics & Computer Science undergraduate (CGPA 9.94/10) with three consecutive perfect semesters and a proven record of building and shipping real-world software. First-place hackathon winner, GDG on Campus Technical Team Member, and Smart India Hackathon qualifier. Full-stack practitioner across React frontends, Supabase backends, and IoT integrations — actively deepening expertise in Machine Learning and Generative AI. Seeking Software Engineering and AI/ML internships at product-focused, high-impact organisations.

EDUCATION

B.E. — Electronics & Computer Science · Vidyalkar Institute of Technology, Mumbai 2024 – 2028

CGPA: 9.94 / 10.00 (Sem 1: 10.00 · Sem 2: 10.00 · Sem 3: 10.00 · Sem 4: 9.74)

Higher Secondary Certificate (Science — PCM + Computer Science) · St. Xavier's High School Completed

HSC: 87.83% **SSC:** 91.60%

TECHNICAL SKILLS

Languages: Python · Java · C · C++ · SQL

Frontend: HTML5 · CSS3 · JavaScript · React · JSX

Backend & Database: Supabase · SQL · REST APIs

Tools: Git · GitHub · VS Code

CS Fundamentals: OOP · Data Structures & Algorithms · DBMS · Problem Solving

Currently Learning: Machine Learning · Deep Learning · Generative AI · Artificial Intelligence

SELECTED PROJECTS

SheSpeaks — AI-Enabled Women Safety & Anonymous Reporting Platform [🔗 github](#)

- Engineered a privacy-first anonymous incident-reporting platform with end-to-end identity protection, real-time Supabase backend, and fully responsive cross-device UI serving women safety needs.
- Designed and implemented role-based authentication workflows, secure data pipelines, and audit-ready data management — prioritising zero data leakage and maximum accessibility.

- Owned the full product lifecycle from wireframing to deployment, collaborating via Git branching, code reviews, and agile iteration sprints.

Stack: Next · JavaScript · Supabase · Git / GitHub

ZYNC — Adaptive Mastery Education Platform [↗ github](#)

- Built personalised adaptive-learning modules that adjust content difficulty based on learner performance, integrating a React SPA with SQL-backed microservices for real-time data sync.
- Architected secure user authentication, relational database schema, and modular component library — reducing UI development time and improving learner retention through a clean UX.
- Led end-to-end feature implementation across registration, progress tracking, and content delivery, applying software engineering best practices throughout.

Stack: React · JavaScript · SQL · Git / GitHub

Krushit — Smart Agriculture IoT Platform [↗ github](#)

- Designed interactive dashboards visualising live IoT agricultural sensor data (soil moisture, temperature, humidity) enabling farmers to make data-driven irrigation and crop decisions.
- Built REST API integration layer bridging physical IoT hardware with the web application, supporting seamless real-time data flow from sensors to dashboard.
- Drove full software lifecycle — system design, frontend build, backend integration, debugging, and feature hardening — from initial prototype to polished demo.

Stack: React · JavaScript · SQL · IoT Integration · Git

EduNexus — Smart Attendance Management System

► **Selected for Smart India Hackathon (SIH) Internal Round**

- Built a cross-platform attendance solution (web + Flutter mobile) with real-time Supabase authentication, QR-based check-in, and responsive dashboards supporting 100+ concurrent users.
- Implemented admin and student role views, attendance analytics, and automated reporting — reducing manual tracking overhead for educators significantly.

Stack: React · Flutter · Supabase · JavaScript

Additional Projects

- CodeQuest — Gamified programming-education platform with points, streaks, and leaderboards that improved learner engagement and daily active usage for student developers.
- SpaceScope — Interactive space-data visualisation platform enabling exploration of astronomical datasets through dynamic charts and immersive UI components.

EXPERIENCE & LEADERSHIP

Core Technical Team Member · Google Developer Groups (GDG) on Campus *October 2025 – Present*

- Built and maintained official GDG event websites and technical assets, improving site load performance and UX for campus developer community events.
- Co-organised workshops, hackathons, and speaker sessions; handled end-to-end deployment, QA testing, and post-event feature iterations.
- Collaborated with a cross-functional team of student developers, designers, and organisers to deliver technically successful, well-attended events.

Events Co-Head · Electronics & Computer Science Student Association (ECSA) *July 2025 – Present*

- Spearheaded end-to-end planning and execution of departmental technical events attended by 100+ students — achieving zero critical coordination failures across all managed events.
- Directed volunteer teams, managed event logistics, and oversaw technical operations including software setup, A/V, and on-day live troubleshooting.

Core Technical Team Member · ECSA *September 2024 – May 2025*

- Delivered technical infrastructure and real-time support for coding competitions, and conducted programming workshops that strengthened department-wide development skills.

ACHIEVEMENTS

- **1st Place — GDG on Campus Women's Day Hackathon (Competing against 20+ teams)**
- Smart India Hackathon (SIH) — Internal Qualifier (EduNexus project selected from department entries)
- Finalist — MIT WPU Hackathon
- Finalist — Bharati Vidyapeeth Hackathon
- Finalist — Datta Meghe Hackathon
